

BORFLEX has developed an outstanding expertise in cutting and machining so many different materials.

As a solutions provider, **BORFLEX** offers a wide range of abrasion-resistant foam pigs for specific pipeline cleaning operations.

FOAM PIGS

Pipeline Safety

FEATURES

- ▶ Efficient cleaning and removal of hard mineral and organic deposits
- ▶ Especially designed for line filling
- ▶ Water evacuation
- ▶ Air removal
- ▶ Hydrostatic testing

TECHNICAL DATAS

Our foam pigs are manufactured with a closed-cell foamed elastomer or EPDM. Both materials meet the chemical processing industry specific requirements regarding abrasion, aggressive fuels and chemicals resistance.

They are especially designed to negotiate short radius curves and important diameter variations. Special superficial coatings may be provided when polyurethane or EPDM is not acceptable.

CUSTOMISED PRODUCT ON DEMAND :

- ▶ Specific material can be proposed for specific chemical applications.
- ▶ Specific geometry (different hardnesses, conical design, bidirectional versions, ...)
